

A horizontal bar chart titled 'Pearson Correlation with Class' on the x-axis. The x-axis ranges from -0.3 to 0.1 with major grid lines every 0.1 units. The chart displays 13 horizontal bars. The top three bars are blue and extend to the right of the zero line, indicating positive correlations. The remaining 10 bars are red and extend to the left of the zero line, indicating negative correlations. The bars are ordered by their absolute correlation value, with the most significant correlations at the top.

Feature	Pearson Correlation with Class
Age	0.15
Gender	0.13
Income	0.09
Education	-0.04
Marital Status	-0.09
Employment	-0.09
Health Insurance	-0.09
Home Ownership	-0.11
Vehicle Ownership	-0.19
Travel Frequency	-0.19
Shopping Frequency	-0.20
Restaurant Visits	-0.26
Subscription Services	-0.30

Heatmap visualization of the confusion matrix for the VGG16 model. The x-axis and y-axis are labeled with classes: V17, V14, V12, V10, V16, V3, V7, V11, V4, V18, and Class. The diagonal elements are dark red, indicating high true positive rates. The 'Class' row and column show some misclassification, with the 'Class' row being mostly blue and the 'Class' column being mostly red.
